Mentoring, Coaching, and Experiential Learning

Beyond formal training, mentoring, coaching, and experiential learning play crucial roles in competency development. Mentors can provide guidance and share their experiences, helping individuals understand how to apply competencies in real-world situations. lominger competencies 67: *The 71F Advantage* National Defense University Press, 2010-09 Includes a foreword by Major General David A. Rubenstein. From the editor: 71F, or 71 Foxtrot, is the AOC (area of concentration) code assigned by the U.S. Army to the specialty of Research Psychology. Qualifying as an Army research psychologist requires, first of all, a Ph.D. from a research (not clinical) intensive graduate psychology program. Due to their advanced education, research psychologists receive a direct commission as Army officers in the Medical Service Corps at the rank of captain. In terms of numbers, the 71F AOC is a small one, with only 25 to 30 officers serving in any given year. However, the 71F impact is much bigger than this small cadre suggests. Army research psychologists apply their extensive training and expertise in the science of psychology and social behavior toward understanding, preserving, and enhancing the health, well being, morale, and performance of Soldiers and military families. As is clear throughout the pages of this book, they do this in many ways and in many areas, but always with a scientific approach. This is the 71F advantage: applying the science of psychology to understand the human dimension, and developing programs, policies, and products to benefit the person in military operations. This book grew out of the April 2008 biennial conference of U.S. Army Research Psychologists, held in Bethesda, Maryland. This meeting was to be my last as Consultant to the Surgeon General for Research Psychology, and I thought it would be a good idea to publish proceedings, which had not been done before. As Consultant, I'd often wished for such a document to help explain to people what it is that Army Research Psychologists do for a living. In addition to our core group of 71Fs, at the Bethesda 2008 meeting we had several brand-new members, and a number of distinguished retirees, the grey-beards of the 71F clan. Together with longtime 71F colleagues Ross Pastel and Mark Vaitkus, I also saw an unusual opportunity to capture some of the history of the Army Research Psychology specialty while providing a representative sample of current 71F research and activities. It seemed to us especially important to do this at a time when the operational demands on the Army

and the total force were reaching unprecedented levels, with no sign of easing, and with the Army in turn relying more heavily on research psychology to inform its programs for protecting the health, well being, and performance of Soldiers and their families.

lominger competencies 67: The CIO Edge Graham Waller, Karen Rubenstrunk, George Hallenbeck, 2010-11-11 Great CIOs consistently exceed key stakeholders' expectations and maximize the business value delivered through their company's technology. What's their secret? Sure, IT professionals need technological smarts, plus an understanding of their company's goals and the competitive landscape. But the best of them possess a far more potent ability: they forge good working relationships with everyone involved in an IT-enabled project, whether it's introducing new hardware or implementing a major business transformation. In *The CIO Edge*, the authors draw on Korn/Ferry International's extensive empirical data on leadership competencies as well as Gartner's research on IT trends and the CIO role. They prove that, for IT leaders, mastering seven essential skills yields big results. This new book lays out the people-to-people leadership competencies that the highest-performing CIOs have in common—including the ability to inspire others, connect with a diverse array of stakeholders, value others' ideas, and manifest caring in their relationships. The authors then explain how to cultivate each defining competency. Learn these skills, and you'll get more work done through others' enabling you to successfully execute more IT projects, generate better results for your company, and concentrate your efforts where they'll exert the most impact. The payoff? As the authors show, you'll work smarter, not harder—and get promoted far faster than your peers.

lominger competencies 67: Organizational Effectiveness Ivan T. Robertson, Militza Callinan, Dave Bartram, 2003-10-17 *Organizational Effectiveness: The Role of Psychology* examines psychological approaches in organizations, not from the more common perspective of their impact on individuals, but in relation to how the work of psychologists impacts on the overall effectiveness of the organization. It also provides a critical review of what psychology has to offer; the way psychologists choose the problems they address, work with others, and evaluate and demonstrate the impact they have. Robertson, Callinan and Bartram have brought together leading researchers and practitioners in work and organizational psychology. Each chapter provides a review of current knowledge, practice, issues and future directions in their own area of expertise, with a focus on contributions and implications for organizational functioning and the wider arena of managerial thinking. This book is for anyone interested in understanding the complex relations between individual, group and organisational performance and effectiveness. It is a valuable and challenging resource for advanced students and practitioners of occupational psychology, organizational behaviour, HRM, and psychological consultancy in organizations.

lominger competencies 67: Learning Agility David F. Hoff, W. Warner Burke, 2017-12-15 Learning agility is not a new concept, but it took years of research to prove that it really does exist, and can be quantified on an individual level. This book explains how learning agility is measured, and explores the ways that this information can be developed and applied by individuals and organizations.

lominger competencies 67: Managerial Effectiveness in a Global Context Jean Brittain Leslie, Maxine A. Dalton, Christopher Ernst, Jennifer J. Deal, 2002 The rapid expansion of globalization and multinational corporations means more and more managers work across the borders of multiple countries. Some of them are expatriates; most are not. And although many of these managers are not wrestling with the issues of relocating and adjusting to living in a different culture, they all find themselves dealing with cultural issues - defined in the broadest context - every time they pick up the phone, log onto their e-mail, or disembark from an airplane. What do these managers do? Is it different from the work they did when they managed in their own countries, and if it is different, how so? What does it take for them to be effective when they manage across so many countries simultaneously? What do these managers need to know in order to be effective? What do organizations need to know and do in order to select and develop people who will manage and lead effectively in the global economy? This report addresses those questions as it documents the findings of a Center for Creative Leadership research study into what factors might predict managerial effectiveness in a global context.

lominger competencies 67: Learning Agility George Hallenbeck, 2016-06-01 Experience is vital for a leader's success, but merely having an experience (such as a challenging new job, a stretch assignment, or an unexpected hardship) isn't enough. The best leaders know not just how to seek out developmental experiences, but how to extract the essential lessons within each experience and apply them to future situations. This book will walk you through a four step process for making the most out of your experiences. You will learn how to seek out beneficial experiences, make sense out of both old and new experiences, internalize the most useful lessons from each experience, and apply those lessons to new, unfamiliar, and challenging situations. By becoming learning agile, you'll be able to use the lessons of experience to meet the challenges headed your way.

lominger competencies 67: Making the Right Connections Susan Tsui Grundmann, 2011-05 Some abilities needed for Federal jobs may be inherently more difficult to learn than others. Research on mental abilities distinguishes among those that can be developed through training, those that are unresponsive to training, and those that are moderately responsive. This dimension is known as trainability. This report contrasts employee perceptions of the trainability of job-relevant abilities with research findings about the actual trainability of these abilities. The goal is to help agencies use training resources to enhance individual and organizational performance by highlighting abilities for which training may be less beneficial than other organizational improvement strategies.
