the curious researcher pdf: Re-Imagining Doctoral Writing Cecile Badenhorst, Brittany Amell, James Burford, 2021 Re-imagining Doctoral Writing explores doctoral writing within a context where doctoral education is undergoing enormous transformation. Despite the importance attributed to doctoral writing for developing scholars, we have a limited understanding of the extent to which conceptualizations of doctoral writing are shared or contested, how ideas of doctoral writing have shifted over time, or where imaginings of the future of doctoral writing might take us. Drawing on historical studies that show how understandings of doctoral writing and doctoral writers have changed over time-as well as considering how doctoral writing has changed as we have moved into the 21st century-the contributors to this volume pursue these areas and explore what might happen if we begin thinking about doctoral writing without imagining a vast absence in front of us. By proceeding from a place in which doctoral writing is seen as a rich and increasingly deep area of scholarship, this book offers tools and approaches that expand and enliven conceptions of what doctoral writing might become and how it might be researched--

the curious researcher pdf: [Decolonizing Methodologies](#) Linda Tuhiwai Smith, 2016-03-15 'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume

urgently up-to-date.

the curious researcher pdf: *Advice for a Young Investigator* Santiago Ramon Y Cajal, 2004-02-27 An anecdotal guide for the perplexed new investigator as well as a refreshing resource for the old pro, covering everything from valuable personality traits for an investigator to social factors conducive to scientific work. Santiago Ramón y Cajal was a mythic figure in science. Hailed as the father of modern anatomy and neurobiology, he was largely responsible for the modern conception of the brain. His groundbreaking works were *New Ideas on the Structure of the Nervous System* and *Histology of the Nervous System in Man and Vertebrates*. In addition to leaving a legacy of unparalleled scientific research, Cajal sought to educate the novice scientist about how science was done and how he thought it should be done. This recently rediscovered classic, first published in 1897, is an anecdotal guide for the perplexed new investigator as well as a refreshing resource for the old pro. Cajal was a pragmatist, aware of the pitfalls of being too idealistic—and he had a sense of humor, particularly evident in his diagnoses of various stereotypes of eccentric scientists. The book covers everything from valuable personality traits for an investigator to social factors conducive to scientific work.

the curious researcher pdf: *Reinforcement Learning, second edition* Richard S. Sutton, Andrew G. Barto, 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In *Reinforcement Learning*, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

the curious researcher pdf: *Shaping Written Knowledge* Charles Bazerman, 1988 The forms taken by scientific writing help to determine the very nature of science itself. In this closely reasoned study, Charles Bazerman views the changing forms of scientific writing as solutions to rhetorical problems faced by scientists arguing for their findings. Examining such works as the early *Philosophical Transactions* and Newton's optical writings as well as *Physical Review*, Bazerman views the changing forms of scientific writing as solutions to rhetorical problems faced by scientists. The rhetoric of science is, Bazerman demonstrates, an embedded part of scientific activity that interacts with other parts of scientific activity, including social structure and empirical experience. This book presents a comprehensive historical account of the rise and development of the genre, and views these forms in relation to empirical experience.

the curious researcher pdf: Writing Spaces 1 Charles Lowe, Pavel Zemliansky, 2010-06-18 Volumes in Writing Spaces: Readings on Writing offer multiple perspectives on a wide-range of topics about writing, much like the model made famous by Wendy Bishop's "The Subject Is . . ." series. In each chapter, authors present their unique views, insights, and strategies for writing by addressing the undergraduate reader directly. Drawing on their own experiences, these teachers-as-writers invite students to join in the larger conversation about developing nearly every aspect of craft of writing. Consequently, each essay functions as a standalone text that can easily complement other selected readings in writing or writing-intensive courses across the disciplines at any level. Topics in Volume 1 of the series include academic writing, how to interpret writing assignments, motives for writing, rhetorical analysis, revision, invention, writing centers, argumentation, narrative, reflective writing, Wikipedia, patchwriting, collaboration, and genres.

the curious researcher pdf: *Curious Naturalists* Dr. Niko Tinbergen, 2017-01-12 Dr. Niko Tinbergen was well known as a naturalist and a student of animal behaviour in England, on the Continent and in the United States. Ever since he was a young student in Holland he had been curious about nature, and in this book he sets out some of the facts that 25 years of curiosity gave him. As a biologist, anything living was his province—the bee-killing wasps and the digger wasps of the Dutch sand dunes; the Snow Bruntings and Phalaropes of Greenland; Hobbies and other hawks; moths and butterflies in various parts of England and Holland; Black-headed Gulls of the Ravenglass nature reserve, Cumberland, the Kittiwakes and Eider Ducks of the Farne Islands off the coast of Northumberland. Readers cannot fail to be struck—and possibly sometimes amused—by the patience and ingenuity shown in the field studies undertaken by Dr. Tinbergen and his fellow naturalists—and which are now passed on for the benefit and interest of his readers. The studies were always undertaken seriously, but this did not prevent Dr. Tinbergen from writing about them in the liveliest way; he realised that quite often he and his friends must have seemed to onlookers to be very curious naturalists indeed.

the curious researcher pdf: *Laboratory Life* Bruno Latour, Steve Woolgar, 2013-04-04 This highly original work presents laboratory science in a deliberately skeptical way: as an anthropological approach to the culture of the scientist. Drawing on recent work in literary criticism, the authors study how the social world of the laboratory produces papers and other texts, and how the scientific vision of reality becomes that set of statements considered, for the time being, too expensive to change. The book is based on field work done by Bruno Latour in Roger Guillemin's laboratory at the Salk Institute and provides an important link between the sociology of modern sciences and laboratory studies in the history of science.
