west coast university entrance exam: The Qualified Student Harold S. Wechsler, 2017-09-29 In The Qualified Student Harold S. Wechsler focuses on methods of student selection used by institutions of higher education in the United States. More specifically, he discusses the way that college and university reformers employed those methods to introduce higher education into a broader cross-section of America, by extending access to an increased number of students from nontraditional backgrounds. Implicit in much of this book is an underlying social and ethical question: How legitimate was and is higher education's regulation of social mobility? Public concern over colleges' and universities' practices became inevitable once they became regulators between social classes. The challenging of colleges' admissions policies in the courts augments similar concerns that have been present in legislatures for decades. The volume is divided into three main sections: Prerequisites, Columbia and the Selective Function, and Implications. It focuses mainly on four universities, The University of Michigan, Columbia University, the University of Chicago, and the City University of New York. Wechsler maintains that unlike other universities, these institutions were pacesetters; they did not adopt a new policy simply because some other college had already adopted it. A new introduction brings the book, originally published in 1977, up to date and demonstrates its continuing importance in today's academic world of selective admissions.

west coast university entrance exam: Institutionalizing Literacy Mary Trachsel, 1992 Mary Trachsel discusses how college entrance examinations have served as an instrument for the academic institutionalization of literacy, arguing that entrance examinations chart a change of view from literacy as achievement to literacy as aptitude. Trachsel begins her study by outlining current theory on literacy. She identifies two separate approaches to the task of defining literacy: a formal approach that explains literacy as an exclusively academic activity and a functional approach that lies in basic opposition to mainstream academic values and practices. Trachsel then examines testing as an academic practice that enforces a primarily formal definition of literacy. In presenting a thorough documentation of historical developments in entrance examinations in English, she notes that while these examinations originated in academic departments of English, they have long since been taken over by bureaucratic agencies, the values and goals of which are at odds with the concept of literacy upheld by the professional community of English studies scholars and teachers. In her final chapter, Trachsel presents a critique of present-day English studies. She illustrates her critique with a historical consideration of entrance examinations in English, providing samples of actual test questions that indicate the larger ideological struggles forming the history of English studies. In voicing her concern with the ways in which the standard entrance examination movement traces the development of a professional identity for English studies specialists, Trachsel encourages all professionals in the field to devote their attention to articulating their own definition of literacy and devising a means for assessing literacy that is in accord with that definition.
