- centum xl: Liber Mahameleth** Jacques Sesiano, 2014-03-18 The Liber mahameleth is a work in Latin written in the mid-12th century based (mainly) on Arabic sources from Islamic Spain. It is now our principal source on mathematics in Islamic Spain at that time; There are few extant Arabic texts and no one is as complete as the LM. It is also the second largest mathematical work from the Latin Middle Ages (the other is by Fibonacci, some 50 years later). Since the three main manuscripts preserving it are incomplete and there are many scribal errors, a reliable Latin text has been established, which reports (in notes) the various readings of the manuscripts and the errors in them. This is how a so-called critical edition is made. This edition of the Latin text is preceded by General Introduction, describing the various manuscripts, the content of the work and what we know about its author. Part Two of the volume is a translation of the text and ends with a glossary of Latin terms. The glossary will be of great importance for the knowledge of Latin scientific terms from that time,

since there is no other mathematical text of this size from the 12th century. Part Three begins with a short introduction and then analyzes all the problems from the text, with a summary of the mathematical methods involved in each chapter. The commentary is a companion to the translation and explains the author's solving methods.

centum xl: War and Memory at the Time of the Fifth Crusade Megan Cassidy-Welch, 2019-06-28 In this book, Megan Cassidy-Welch challenges the notion that using memories of war to articulate and communicate collective identity is exclusively a modern phenomenon. War and Memory at the Time of the Fifth Crusade explores how and why remembering war came to be culturally meaningful during the early thirteenth century. By the 1200s, discourses of crusading were deeply steeped in the language of memory: crusaders understood themselves to be acting in remembrance of Christ's sacrifice and following in the footsteps of their ancestors. At the same time, the foundational narratives of the First Crusade began to be transformed by vernacular histories and the advent of crusading romance. Examining how the Fifth Crusade was remembered and commemorated during its triumphs and immediately after its disastrous conclusion, Cassidy-Welch brings a nuanced perspective to the prevailing historiography on war memory, showing that remembering war was significant and meaningful centuries before the advent of the nation-state. This thoughtful and novel study of the Fifth Crusade shows it to be a key moment in the history of remembering war and provides new insights into medieval communication. It will be invaluable reading for scholars interested in the Fifth Crusade, medieval war memory, and the use of war memory.

centum xl: Diagramming Devotion Jeffrey F. Hamburger, 2020-09-21 During the European Middle Ages, diagrams provided a critical tool of analysis in cosmological and theological debates. In addition to drawing relationships among diverse areas of human knowledge and experience, diagrams themselves generated such knowledge in the first place. In *Diagramming Devotion*, Jeffrey F. Hamburger examines two monumental works that are diagrammatic to their core: a famous set of picture poems of unrivaled complexity by the Carolingian monk Hrabanus Maurus, devoted to the praise of the cross, and a virtually unknown commentary on Hrabanus's work composed almost five hundred years later by the Dominican friar Berthold of Nuremberg. Berthold's profusely illustrated elaboration of Hrabanus translated his predecessor's poems into a series of almost one hundred diagrams. By examining Berthold of Nuremberg's transformation of a Carolingian classic, Hamburger brings modern and medieval visual culture into dialogue, traces important changes in medieval visual culture, and introduces new ways of thinking about diagrams as an enduring visual and conceptual model.

centum xl: *Prester John: The Legend and its Sources* Keagan Brewer, 2019-08-08 The legend of Prester John has received much scholarly attention over the last hundred years, but never before have the sources been collected and coherently presented to readers. This book now brings together a fully-representative set of texts setting out the many and various sources from which we get our knowledge of the legend. These texts, spanning a time period from the Crusades to the Enlightenment, are presented in their original languages and in English translation (for many it is the first time they have been available in English). The story of the mysterious oriental leader Prester John, ruler of a land teeming with marvels who may come to the aid of Christians in the Levant, held an intense grip on the medieval mind from the first references in twelfth-century Crusader literature and into the early-modern period. But Prester John was a man of shifting identity, being at different times and for different reasons associated with Chingis Khan and the Mongols, with the Christian kingdom of Ethiopia, with China, Tibet, South Africa and West Africa. In order to orient the reader, each of these iterations is explained in the comprehensive introduction, and in the introductions to texts and sections. The introduction also raises a thorny question not often considered: whether or not medieval audiences believed in the reality of Prester John and the Prester John Letter. The book is completed with three valuable appendices: a list of all known references to Prester John in medieval and early modern sources, a thorough description of the manuscript traditions of the all-important Prester John Letter, and a brief description of Prester John in the history of cartography.
