diabetes bulletin board ideas: *Handbook for Pharmacy Educators* Shane Desselle, Dana P Hammer, 2002-08-22 What can senior pharmacy faculty do to help their junior colleagues succeed? The *Handbook for Pharmacy Educators: Getting Adjusted as a New Pharmacy Faculty Member* gives voice to junior pharmacy faculty members who present their personal accounts of their experiences on the job. These six junior faculty, representing the basic, administrative, and clinical sciences, share their lessons learned, give advice on what to do (and what NOT to do) as a new faculty member, and relate the triumphs and challenges they met along the way. For balance, a senior faculty member with experience in both teaching and research environments shares his thoughts on what the other authors have to say. From the editors: "Despite the existence of a couple of excellent references in this area, there has not been any previous work that takes this approach—that is, of allowing junior faculty, representing both teaching and research institutions, to share 'memoirs' of their own unique experiences. We hope that this approach will ease the way for new faculty members and provide senior faculty, deans, and administrators who are long removed from new faculty status a better understanding of the hurdles that new faculty must clear today. In gaining this understanding, they may become even better advisors, mentors, and administrators." The *Handbook for Pharmacy Educators: Getting Adjusted as a New Pharmacy Faculty Member* will help new faculty address the questions that start with "how," like, How can I: be sure to start my teaching out on the right foot? figure out which teaching strategies are most appropriate? establish and develop good rapport with my students? begin to establish mutually beneficial relationships with

my colleagues? socialize and make new friends in my new environment? gain support for my research agenda? learn what resources are available to me? find out about performance appraisals and rewards? handle or appreciate the extra pressures facing faculty who don't happen to be white males?

diabetes bulletin board ideas: *The Great Indoors* Emily Anthes, 2020-06-23 An Architectural Record Notable Book A fascinating, thought-provoking journey into our built environment Modern humans are an indoor species. We spend 90 percent of our time inside, shuttling between homes and offices, schools and stores, restaurants and gyms. And yet, in many ways, the indoor world remains unexplored territory. For all the time we spend inside buildings, we rarely stop to consider: How do these spaces affect our mental and physical well-being? Our thoughts, feelings, and behaviors? Our productivity, performance, and relationships? In this wide-ranging, character-driven book, science journalist Emily Anthes takes us on an adventure into the buildings in which we spend our days, exploring the profound, and sometimes unexpected, ways that they shape our lives. Drawing on cutting-edge research, she probes the pain-killing power of a well-placed window and examines how the right office layout can expand our social networks. She investigates how room temperature regulates our cognitive performance, how the microbes hiding in our homes influence our immune systems, and how cafeteria design affects what—and how much—we eat. Along the way, Anthes takes readers into an operating room designed to minimize medical errors, a school designed to boost students' physical fitness, and a prison designed to support inmates' psychological needs. And she previews the homes of the future, from the high-tech houses that could monitor our health to the 3D-printed structures that might allow us to live on the Moon. *The Great Indoors* provides a fresh perspective on our most familiar surroundings and a new understanding of the power of architecture and design. It's an argument for thoughtful interventions into the built environment and a story about how to build a better world—one room at a time.
