**gce past papers physics: The Role of Science Popularization in Science, Technology & Innovation Policy** Akram Ghadimi, Hasan Jawaid Khan, 2021-01-06 Popularisation of Science, Technology and Innovation (STI) is a process of communicating and appropriating scientific and technological knowledge among broad sectors of the population. This process, however, must contribute to an effective integration of a number of historical, cultural, political, social and economic situations; and make such knowledge a central component of the culture of social awareness and collective intelligence. The possibilities of gaining access to information are changing our vision while transforming the relationship between human beings, and the appropriation and dissemination of knowledge. Today, access to STI related knowledge is synonymous with development, well-being and improving quality of life. In this context, S&T literacy is a social and ethical right of all human beings. But developing countries face formidable challenges in increasing the capacity to store, retrieve and transmit S&T information. For this reason, the areas to be reached by STI must be broadened to integrate formal education and communication with informal efforts; while also making scientific and technological knowledge available to the ordinary citizen. This book includes 14 papers contributed by researchers, scientists, experts and professionals from 9 different developing countries namely Bhutan, Cuba, India, Iran, Mauritius, Nigeria, Sri Lanka, Togo and Zimbabwe. And each paper gives significant insight into various policies and strategies that are being adopted or need to be adopted by the developing countries to ensure effective communication and popularisation of scientific knowledge.

**gce past papers physics: Innovative Strategies for Accelerated Human Resources Development in South Asia** Asian Development Bank, 2017-12-01 Assessment of student learning outcomes (ASLO) is one of the key activities in teaching and learning. It serves as the source of information in determining the quality of education at the classroom and national levels. Results from any assessment have an influence on decision making, on policy development related to improving individual student achievement, and to ensure the equity and quality of an education system. ASLO provides teachers and school heads with information for making decisions regarding a students' progress. The information allows teachers and school heads to understand a students' performance better. This report reviews ASLO in three South Asian countries---Bangladesh, Nepal, and Sri Lanka---with a focus on public examinations, national assessment, school-based assessment,

and classroom assessment practiced in these countries.
