Wound Care and Dressing

Clear, step-by-step instructions guide corpsmen through proper wound cleaning, dressing, and bandaging techniques. The manual emphasizes infection prevention measures and the importance of maintaining sterile fields. It also covers the identification and management of different wound types, including punctures, lacerations, and abrasions.

Intravenous Therapy and Injections

The manual details procedures for establishing intravenous (IV) access, administering fluids, and delivering medications via injections. It highlights aseptic techniques, vein selection, and monitoring for adverse reactions. Proper documentation and patient education are also stressed to enhance treatment outcomes.

Infection Control and Hygiene

Infection control protocols are thoroughly addressed to minimize the risk of healthcare-associated infections. Corpsmen are instructed on hand hygiene, use of personal protective equipment (PPE), sterilization of instruments, and disposal of medical waste. These practices are critical in maintaining a safe environment for both patients and medical personnel.

This particular volume covers a relatively obscure chapter in U.S. Marine Corps history—the activities of Marines in Vietnam between 1954 and 1964. The narrative traces the evolution of those activities from a one-man advisory operation at the conclusion of the French-Indochina War in 1954 to the advisory and combat support activities of some 700 Marines at the end of 1964. As the introductory volume for the series this account has an important secondary objective: to establish a geographical, political, and military foundation upon which the subsequent histories can be developed.

hospital corpsman manual: *Crisis Standards of Care* Institute of Medicine, Board on Health Sciences Policy, Committee on Guidance for Establishing Standards of Care for Use in Disaster Situations, 2012-08-26 Catastrophic disasters occurring in 2011 in the United States and worldwide-from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand-have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations-both naturally occurring and man-made-under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement-state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. *Crisis Standards of Care* is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.
