ingersoll rand r75i manual: *Chinese Modernity and the Peasant Path* Kathy Le Mons Walker, 1999 This ambitious work traces a social history of semicolonialism in late-nineteenth- and early-twentieth-century China. It takes as its central concern the intertwining of two antagonistic forces: elite constructions of modernity shaped globally, and an alternate line of peasant resistance and development. Nantong county and the northern portion of the commercially advanced Yangzi Delta form its focal points. Lying in the hinterland of and connected in myriad ways with the treaty port of Shanghai, which in the late nineteenth century became the center of imperialist activity in China, the northern delta is an ideal locale for examining how the acquisition, transmission, and

contestation of power may have changed during the extended moment of semicolonial encounter. The author's specific project is to unravel the multiple strands of the semicolonial process and thereby the dominant and alternative histories it embodied. In emphasizing semicolonialism as a structural context shaping events, the book opens up a pivotal but silent area in the history of modern China. In confronting the development of capitalism as a historical phenomenon and suggesting that its consequences for land and labor on a global scale need greater theoretical and historical scrutiny, the book forces a new understanding of China's modernity. The book is in two parts. The first delineates key long-term dynamics in the political, economic, and social history of the area from the late Ming dynasty to the Opium Wars. The second part begins with an examination of the rise of modernist urban power in the context of accelerating growth in the textile and cotton trades, focusing on such topics as economic restructuring under Shanghai's impetus, new forms of economic and political organization, and contention as well as cooperation within the urban elite. Turning to the countryside, the book then examines the regearing of the rural economy to the needs of urban capital, local and global; outlines the emergence of modern landlordism and other rural "capitalisms"; analyzes class formation in the peasantry associated with changes in labor organization, tenurial arrangements, and the gendered division of labor; and traces the coalescence of a distinctive political discourse through which peasants contested certain development schemes and advanced alternative conceptions of community and nation.

ingersoll rand r75i manual: The Rand/UCLA Appropriateness Method User's Manual Kathryn Fitch, Steven J. Bernstein, Maria Delores Aguilar, Mary S. Aguilar, Bernard Burnand, Pablo Lazaro, Juan Ramon LaCalle, 2001 Health systems should function in such a way that the amount of inappropriate care is minimized, while at the same time stinting as little as possible on appropriate and necessary care. The ability to determine and identify which care is overused and which is underused is essential to this functioning. To this end, the RAND/UCLA Appropriateness Method was developed in the 1980s. It has been further developed and refined in North America and, increasingly, in Europe. The rationale behind the method is that randomized clinical trials--the gold standard for evidence-based medicine--are generally either not available or cannot provide evidence at a level of detail sufficient to apply to the wide range of patients seen in everyday clinical practice. Although robust scientific evidence about the benefits of many procedures is lacking, physicians must nonetheless make decisions every day about when to use them. Consequently, a method was developed that combined the best available scientific evidence with the collective judgment of experts to yield a statement regarding the appropriateness of performing a procedure at the level of patient-specific symptoms, medical history, and test results. This manual presents step-by-step guidelines for conceptualising, designing, and carrying out a study of the appropriateness of medical or surgical procedures (for either diagnosis or treatment) using the RAND/UCLA Appropriateness Method. The manual distills the experience of many researchers in North America and Europe and presents current (as of the year 2000) thinking on the subject. Although the manual is self-contained and complete, the authors do not recommend that those unfamiliar with the RAND/UCLA Appropriateness Method independently conduct an appropriateness study; instead, they suggest seeing one before doing one. To this end, contact information is provided to assist potential users of the method.
