This book examines how chemtrails and ionospheric heaters like the High-frequency Active Auroral Research Project (HAARP) in Alaska services a full-spectrum dominance. This Revolution in Military Affairs needs an atmospheric medium to assure wireless access to the bodies and brains of anyone on Earth—from heat-seeking missiles to a form of mind control. How sinister are these technologies? Are we being prepared for a global village lockdown? The recent release of NSA records have reminded Americans that eyes in the sky are tracking us as supercomputers record the phone calls, e-mails, internet posts, and even the brain frequencies of millions. Elana M. Freeland's startling book sifts through the confusion surrounding chemtrails-versus-contrails and how extreme weather is being geo-engineered to enrich disaster capitalists and intimidate nations. A deconstruction of Bernard J. Eastlund's HAARP patent points to other covert agendas, such as a global Smart Grid infrastructure that enables access to every body and brain on Earth, a Transhumanist future that erases lines between human and machine, and Nanobiological hybrids armed with microprocessors that infest and harm human bodies.

Describes the development of wildlife administration and management in New Zealand which led to this combination of functions in the Wildlife Service, and the changes in attitudes towards wildlife and conservation which eventually in 1987 brought about its replacement. Against this background of shifting ideas and policies, Working for wildlife also presents the exploits and achievements of the dedicated band of Wildlife officers. They were pre-eminently people of action rather than bureaucratic administrators: fisheries technicians wading in chilly streams to record and measure migrating trout; fauna conservation field officers and scientists searching for the last of the kakapo in the precipitous Fiordland country, or scaling the cliffs of Little Mangere Island to find ways to rescue the black robins ; deer-cullers in the hills fighting the Deer Menace. They were the original good keen men; the exploits of those who worked for Wildlife will stir the pride of all New Zealanders.--Back cover.
